

Developer Tasks for Biznex.ae

About Biznex:

This is a B2B platform that includes machinery, lighting, medical devices, etc., where I will be accepting paid membership from companies so their products can be uploaded on the website. After payment, they will send me their online catalog or existing csv files and I will upload it for them. There is no procurement in this site. Users will only be able to see contact information of the vendor and send a message through a contact form.

There are two areas that I need modifications in:

- A. Paid Membership Registration
- B. Product Page, as well as company profile page.

A. **Paid membership:**

Note: Please keep in mind that I am open to suggestions and flexible to make adjustments to the flow.

Create registration and payment page according to user flow below:

Explanation of flow:

1. Registration will have a simple standard User registration fields to fill on the left (Add a note 'Register for free'). Company Registration will be on the right and just have a 'Register' link below it. Also add a small text below this 'Join for AED 1 a day'.
(Find the different fields detailed for both registrations in Page 6).
2. When normal user registration is complete, a 'registration successful' message is given and either stays in the page or rerouted to homepage.
3. The next page after clicking on company registration is the pricing page. (Find details of the payment plan in Page 7)
4. Company registration will be comprehensive and one of the fields should have the ability to upload one pdf document. If not possible to upload file, let me know.
5. Registration can be linked to a product which can be set for the value of the registration fee and payment can be made via Shopify checkout this way. Also please setup the Shopify accepted Paytabs Payment Gateway.
6. After payment is successfully completed, a page loads that has a message:

"Thank you for registering your company with Biznex. Please forward your online product catalog to customersupport@biznex.ae for upload. Your product listings will be uploaded in 2-3 business days, and upon completion, you shall receive notification by email.

Note: Upto 25 products listings are included with yearly membership. Additional product listings will be charged at AED 5 per product."

Please see whether the message can be added to the 'checkout complete' page in Shopify. If not, make a new page for this message and have the user automatically rerouted to this after payment is complete.

B. Product Page:

- Rename 'Add to cart' button to say 'Get Quote'. This change should be universal for the entire site, not just for the product page. When it is not on the product page, the link to the cart should be removed and rerouted to the particular product page instead.
- In the **product page**, re-program the new 'Get Quote' button to have a contact form pop-up, having the fields:
 - Name
 - Company
 - Email
 - Phone
 - Message box

(I know that this will be sent to me and I will manually forward it to the company concerned)

This contact form is also to be open for all visitors regardless if they are signed in or not.
- Price field should give me option in the backend to choose to enter
 - Price
 - "Ask for Price" (If there is no price to enter)
 - Price/day (For rental products)

Please let me know the best solutions for this. I know we can hide the price completely, but that may leave an odd blank space.
- The product description area should have multiple tabs for
 - Product Description (text entry)
 - Technical Information (Should contain a tabulation that is editable)
 - Company Profile (text entry)
 - Company Contact
- Company contact details will include company name, email, phone number, address and website URL. They should be hidden until signed on.
- First set of Rolling products will be the related products (which is already there)
- Second set of Rolling products to be only products by the particular vendor. It will be called 'Other products by Vendor'
- Create a company page template that can be used for all companies. It will have company logo, name, address, contact email & number located at the top section. Below this, will be two tabs - Company Profile and Company Products. Company profile will again be just a text entry. Company products will have all the products of that vendor grouped together. Shopify already can group products by vendor. I will just want that applied here.
(Company contact details should also be hidden until user is signed on)

Use this as an example of how I would like the company page template to be like.

- You can remap the Shipping info, return policy and help links that are already there from the theme backend if you want. I will not need it, so you can use that to link to company page, etc.

--- Continue below to the next page for details on the registration fields and payment plans ---

USER REGISTRATION FIELDS:

Salutation (Mr / Ms)
First Name
Last Name
Designation
Company
Phone
Email
Password
Confirm Password

COMPANY REGISTRATION FIELDS:

Please have the following sections and fields:

Login Information:

Salutation (Mr / Ms)
First Name
Last Name
Designation
Company
Phone
Email
Password
Confirm Password

Company Information:

Industry
Website
Sales Dept. Email
Sales Dept. Phone
Address
City
Country
PO Box
